The course covers historical events related to Ebola, its biological classification, epidemiology and current facts, pathogenicity/toxicity, patient presentation, and treatments and supportive care. The goal of the course is for healthcare providers to understand the pathways for Ebola infection in humans, understand the history of the current outbreak, and how to provide supportive care management for hospitalized patients with Ebola.

Upon completion of this course, you will be able to learn:

- The epidemiology, clinical presentation and diagnosis of Ebola virus infection
- The magnitude of current Ebola outbreak in West Africa and travel associated cases around the world.
- The modes of transmission of the Ebola virus from bats to various animal populations to humans.
- The clinical progression / clinical presentation of Ebola virus disease
- Diagnosis of Ebola virus
- The management/treatment of patients with viral hemorrhagic fever caused by the Ebola virus
- Public Health Response: Isolation, Quarantine, Contact Tracing, and Public Education.

Course Fee: $10 / Participant
