

NON-CARIOUS CERVICAL LESIONS (NCCLs)

As the population ages and teeth are increasingly retained for life, the incidence of Non-carious cervical tooth surface loss is increasing. In-depth knowledge about their etiology and management is essential for current dental practice. In this course, the clinician will be able to identify NCCLs, understand various etiology, behaviors & risks associated with NCCLs, and most updates guidelines or management and treatment of NCCLs .

Upon completion of this course, you will be able to:

- Review the history of Erosive, Abrasive and Abfraction lesions.
- Learn about the prevalence of NCCLs.
- Understand the classification of NCCLs.
- Understand the intrinsic and extrinsic etiologies for NCCLs.
- Learn about the most updated theories in etiology of NCCLs.
- Understand a comprehensive approach in diagnosis and management through risk assessments.
- Learn about different treatment options for NCCLs and how to manage them.
- Learn about management of the operative field for long term success of NCCLs.
- Learn about the preparation of tooth for restoration.
- Learn about challenges associated with restoring NCCLs.
- Learn about restorative materials used for restoration of NCCLs and long term success.
- Learn about different composite bonding and how it affects long term success of the restoration.
