

PHYSICAL THERAPY MANAGEMENT OF HEADACHES

This course provides the physical therapist with up to date research regarding the diagnosis and physical therapy management of headaches. The most recent International Headache Society classifications will be discussed as well as current evidence regarding treatment .

Upon completion of this course, you will be able to learn:

- Discuss the differences between primary and secondary headaches.
- List the most common cause of primary and secondary headaches.
- Discuss pertinent portions of a comprehensive physical therapy examination for patients with headaches.
- Recognize important differences in three common types of headache: tension-type headache, cervicogenic headache, and migraine.
- Discuss the clinical practice guidelines for examination, diagnosis, and treatment planning for patients with neck pain.
- Describe the most appropriate physical therapy interventions for patients with headaches using the most recent clinical evidence.
